Quick fixes and how to reach us

What this is

Every strategy a clinician recommends is, at first, a hypothesis — informed and considered, but untested in the real, messy world of an actual Tuesday afternoon. Strategy Effectiveness closes that loop: it turns quick, real-world ratings from parents and teachers into a picture of what's genuinely working.

● SIGNAL, NOT SCIENCE

A rating is one person's honest read of one moment. The app counts and displays; it never diagnoses or recommends on your behalf. Sample counts are shown everywhere a percentage appears, and anything based on too little data says so plainly rather than presenting a confident-looking number.

Every rating ask is skippable in one tap. At most one ask ever appears per Calm session, and a teacher is never asked more than three times a week per child. Nobody is nagged into rating anything.

Rating, as a parent

The only rating ask a parent sees happens naturally on the way out of the Calm flow, for the last card actually looked at.

One tap, then straight on to the next step — no separate confirmation screen

This never appears if you leave via the safety line — see the Calm Button guide for that path. It's about the strategy card, not the moment itself.

The "Helped" counter

Once a strategy has a positive rating or two behind it, a small warm badge appears on it in "From your Clinical Team" on your child's passport.

Triggers

Unplanned transitions

Any change of activity introduced without advance warning.

From FBA - Dr. Emma Walsh, Behavioural Psychologist - 13 Aug 2026

Sensory overload

Loud or crowded environments, particularly assembly and the yard at break time.

From FBA - Dr. Emma Walsh, Behavioural Psychologist - 13 Aug 2026

Setting Events

Poor sleep the night before

Reduces Alfie's tolerance for the same triggers the next day.

From FBA - Dr. Emma Walsh, Behavioural Psychologist - 13 Aug 2026

Home Strategies

1. Visual transition timer

- Show the 5-minute visual timer before ending a preferred activity.
- Pair with a calm verbal countdown at the 2-minute and 1-minute marks.

♥ Helped 4 times

From FBA - Dr. Emma Walsh, Behavioural Psychologist - 13 Aug 2026

2. Offer two calm-down choices

- When Alfie is getting overwhelmed, offer two concrete choices: quiet corner or headphones.
- Avoid open-ended 'what do you need?' in the moment -- too much to process while dysregulated.

From FBA - Dr. Emma Walsh, Behavioural Psychologist - 13 Aug 2026

3. Morning visual schedule

- Use the laminated morning schedule card at breakfast.
- Let Alfie tick off each step himself as he completes it.

From FBA - Dr. Emma Walsh, Behavioural Psychologist - 13 Aug 2026

School Strategies

1. Give a 2-minute transition warning

- Before ending an activity, give a spoken 2-minute warning plus the visual timer.
- Avoid surprise transitions during PE and art -- these are his hardest transitions.

♥ Helped 4 times

From FBA - Dr. Emma Walsh, Behavioural Psychologist - 13 Aug 2026

2. Offer a sensory break card

Alfie can show his break card to request 5 minutes in the quiet corner without asking verbally.

♥ Helped 2 times

From FBA - Dr. Emma Walsh, Behavioural Psychologist - 13 Aug 2026

Shared Strategies

1. Calm, low tone during distress

- Speak slowly, one short sentence at a time.
- Wait for him to respond before saying anything else.

♥ Helped 2 times

From FBA - Dr. Emma Walsh, Behavioural Psychologist - 13 Aug 2026

💛 A quiet confirmation something is working — never a negative counter

You'll never see a count of times something *didn't* help on your own view — this counter is deliberately warmth-only. A strategy with no ratings yet, or only "not helping" ratings, simply shows nothing here.

Rating, as a teacher

Your end-of-day update gains one optional extra step: a quick check on whether you used any of the pupil's school or shared strategies today.

Step 5 of 5

Alfie

Did you use any of Alfie's strategies today?

Give a 2-minute transition warning

Offer a sensory break card

Calm, low tone during distress

Skip

Every school and shared strategy shows as a tappable chip

Tapping a chip reveals the three options right there — no separate screen. You can rate up to two strategies per update; "Skip" is always available and always visible.

Step 5 of 5
Alfie

Did you use any of Alfie's strategies today?

Give a 2-minute transition warning

Helped A little Not this time

Offer a sensory break card

Calm, low tone during distress

Skip

A rated chip shows a checkmark; the rest stay tappable

This step only ever appears up to **three times a week** per pupil, whether or not you actually rate anything — the limit counts how often you're asked, not how often you answer. You'll never see it more than that, however many EOD updates you send.

You'll only ever see strategies you're already able to see elsewhere on the passport — school and shared strategies, never anything marked home-only.

Reading it, as a clinician

Three pieces make up the clinician side: tagging strategies with a type, a per-child effectiveness view, and a caseload-wide ranking.

Tagging at authoring

Every strategy in the FBA's Recommendations section can optionally carry a strategy type — a shared vocabulary like "Transition warning" or "Choice-making" that lets ratings roll up meaningfully across different children. Tagging is metadata, so it stays editable even after the FBA is locked.

Home

- Speak slowly, one short sentence at a time.

A "Strategy type" select sits under every recommendation, home, school, or shared

Untagged strategies are never treated as incomplete — they simply group as "Untagged" in every rollup, with a gentle nudge to tag them for clearer insight later.

Per-child effectiveness

The Clinical File's Effectiveness tab shows every deployed strategy with a proportion bar of Helped / A little / Not, a home-vs-school split wherever both have data, and a sample count on everything.

Below a small sample size, an honest "Early signal" note replaces a misleadingly confident percentage

This view is read-only — it counts and displays, it never recommends dropping or keeping a strategy on your behalf.

Strategy Insights, across your caseload

From your dashboard, Strategy Insights ranks every strategy type across your own actively-linked cases — filterable by home/school and by time period.

Ranked by rating volume, with the Untagged bucket surfaced honestly rather than hidden

Tap any row to drill into exactly which children are behind that number, with a link straight into each one's Clinical File.

A per-child breakdown, one tap from the ranked list

● SCOPED TO YOU, ALWAYS

This view only ever reflects your own currently active-linked cases. If a case is revoked, it drops out of every rollup immediately — there's nothing to manually refresh or clear.

Operating Area

Your verification credentials and your More menu both carry an Operating Area field — the county or counties you practise in.

Which county do you call home?

Dublin

This helps us understand where support is needed most.

Save and continue

Save and exit

Optional, and editable later from the same section you filled it in

It's entirely optional, and it helps us understand, in aggregate, where support is genuinely needed most across the country — nothing more specific than that. It's the same underlying county reference data a clinician's own

Operating Area uses, which is deliberately structured so counties outside the Republic of Ireland can be added later without any rework.

Help & Support

A few common questions about Strategy Effectiveness specifically.

As a parent, can I rate a strategy any time I like, not just after Calm?

Not currently — the rating ask exists only on the way out of a Calm session, tied to the last card viewed. This keeps it low-friction and prevents any single strategy from being nagged about.

I'm a teacher and don't see the strategy-rating step in my EOD update.

It only appears when the pupil has at least one school or shared strategy to rate, and you're under the weekly ask limit. If neither is true, the update simply has its usual four steps.

As a clinician, why does a strategy type I tagged still show as "Untagged" in Strategy Insights?

Insights and the Effectiveness view read the tag from the strategy's already-extracted copy on the passport, not from the FBA form itself. If you tag a strategy post-hoc on a locked FBA, that update now propagates through automatically — if you still see a mismatch, it's worth flagging to us.

Can a teacher see aggregate ratings, the way a clinician can?

No — teachers can rate school and shared strategies, but never see any rollup or aggregate. Strategy Insights and the Effectiveness view are clinician-only.
